Data Security Envisioning Workshop

Navigating the toolkit contents – what is in the box.

The Data Security Envisioning Workshop toolkit comes with a wealth of contents,
suited for both a first-time delivery and consecutive engagements by experienced resources.

Dear Partner,

Thank you for downloading the Data Security Envisioning Workshop toolkit.

The Data Security Envisioning Workshop is a **Sales Engagement** that is part of a suite of engagements that enable partners to demonstrate value, build customer intent, and maximize opportunities for Security.

As companies adopt cloud technologies, partners can help accelerate customers' digital transformation by providing security, privacy, and compliance solutions. Helping customers uncover potentially unknown data, privacy, and regulatory risks in their organization and highlighting how Microsoft Purview solutions can help is one of the strongest ways you as a partner can deliver customer value. You are encouraged to leverage the sales engagements to conduct effective conversations with your customers to showcase the Microsoft portfolio across security, compliance and identity while accelerating opportunities.

> ⚠ **Important**
> *To align with new product releases and feedback from delivered engagements, we frequently update the documents, presentation decks and other collateral in the Data Security Envisioning Workshop kit. We strongly encourage you to always download the latest version of the Data Security Envisioning Workshop toolkit before starting a new customer engagement.*
